This year, Carrier Transicold is commemorating the 50th anniversary of the refrigeration system design that helped revolutionize the global transport of perishable and frozen goods via shipping containers.

OVER 1.3 MILLION
units sold
since 1968

Arranged side by side, they would stretch almost
2,000 MILES

OVER 850,000
Carrier reefer units in active service

THAT’S 87X
the number of commercial airliners flying today

1 million Carrier container units
could safely transport
140 BILLION BANANAS

That’s enough to provide every person on the planet with a banana a day for 20 DAYS

Assuming all 1 million Carrier container units ever sold were refrigerating a 40-foot container filled with bananas.

On any given day, Carrier Transicold container refrigeration systems help protect more than $9 BILLION worth of perishable food and medicine traveling around the world.
